WEEK 2 · DAY 3 · FINAL PROJECT

Project Kickoff Worksheet

Fill it in, then send the email to your unit head.

Fill this in **today**, then send the email in section 5. Bring your unit head's reply to **Week 3 · Day 3**. Full rules and grading: `week-6/final-project/Final-Project-Requirements.pdf`.

1. Pick ONE brief

✔	Brief	The question in Naija words
☐	**A. Telemetry anomaly detection**	"Which hours did the satellite behave strangely, and what was the cause?"
☐	**B. Power and battery degradation**	"When will the battery be too tired to carry us through eclipse?"
☐	**C. RF link-quality prediction**	"Will the rain cut our signal tomorrow?"
☐	**D. Carrier and capacity monitoring**	"When will the expressway be full?"
☐	**E. Site-downtime prediction**	"Which VSAT sites will give us wahala next week?"

Adapting a brief? Write what you'd change (needs your unit head's OK):

2. Name the process (not a topic)

❌ Too vague: "satellite data", "network performance", "something with AI"

✅ A named process with an owner: "the weekly battery-health review on the bus subsystem", "VSAT site fault escalation in the NOC"

	Your answer
My unit	
The named process	
Who owns it (name / role)	
Who will use my tool	
The question my tool answers	

3. The data

	Your answer
Source system / export	
What one row is (e.g. one hour of one channel)	
Time span available (how many months/years)	
Cadence (hourly / daily / weekly / monthly)	
Time zone of the timestamps (UTC or WAT?)	
Known gaps or problems	
Labels / ground truth? (maintenance log, tickets, operator notes)	

4. Data restrictions: tick every box

☐ I know which parts of this data are **restricted**.

☐ Real data stays on **NIGCOMSAT systems** (training server or work laptop). It does not go into Colab without written agreement.

☐ I will commit **code only** to GitHub, never the raw export.

☐ I will **describe the shape** of the data to AI tools, never paste it.

5. The email to your unit head

Subject: Time-series training: final-project scope for approval

Dear _____,

For my final project in the NIGCOMSAT time-series programme, I'd like to build a small monitoring tool for _____ (named process). - **Brief:** ____ (A–E) - **Data I'd use:** _____ (system/export), _____ (span), _____ (cadence). It stays on NIGCOMSAT systems; nothing is uploaded to outside tools. - **Who it's for:** _____ - **Output:** a ☐ dashboard / ☐ daily report on the training server.

Could you confirm by replying to this email? Thank you.

☐ Email sent

☐ Reply received (keep it: it goes into your final submission)

6. My checkpoint plan

Checkpoint	When	What I'll bring	Done
🎯 Brief chosen	Week 2 · Day 3	This worksheet + the draft email	☐
📩 Data in hand	Week 3 · Day 3	Unit head's reply + data loaded and profiled	☐

Checkpoint	When	What I'll bring	Done
🛠️ Method drafted	Week 4 · Day 3	First version of my detector / forecast / trend-to-threshold	☐
⚖️ Honest test	Week 5 · Day 3	Temporal split + comparison with a simple baseline	☐
🎤 Demo day	Week 6 · Day 3	Working tool, 2–4 page report, 5-minute demo	☐

💡 **Three yes answers = a good project:** Is it in *my* unit? Can I get the *data*? Does someone *own* the process?
